

Municipal Products > ClearFox® Containerised CFC

What is the ClearFox® Containerised CFC?

A modular, expandable containerised sewage treatment system for 100 to >5000 people – comprising containerised buffer, biological and clarifier modules.

How does it work?

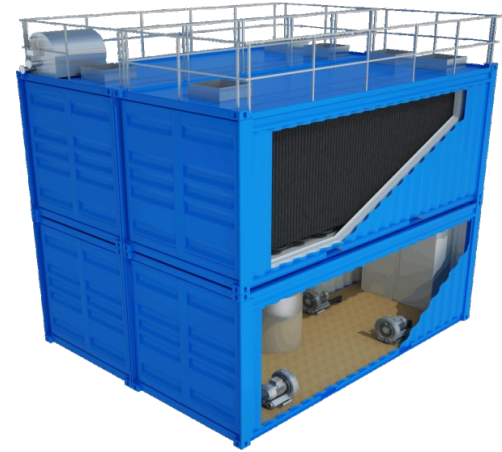

The ClearFox® Containerised CFC used a fixed bed biological reactor and clarifier to biologically treat sewage to any required standard.

What is special about the ClearFox® Containerised CFC?

It is a plug and play, modular and flexible solution for any project type and size. Lower O&M costs and lower capital cost than other technologies.

What are its applications?

Decentralized sewage treatment, worker camps, drilling camps, military camps, hotels, small communities, holiday camps, motorway service stations, villages.

Technical Information

- A range of modular units including biological containers, clarifier containers, technical containers with disinfection, nutrient removal, filtration, etc.
- A containerised system can be rapidly built for ANY project size and to meet ANY project effluent standard.
- A single 20ft containerised biological CFC module can degrade 100kg COD and 40kg BOD per day [800PE]
- 20 year guarantee.
- ClearFox® containerised systems have been Independently tested and verified by PIA GmbH.
- Can be repositioned easily or increased in capacity with the addition of further modules.
